MP3: Numerical Accuracy Experiments

MP3 M1: Trajectory Divergence

Region: x ∈ [-0.7530, -0.7490], y ∈ [0.0990, 0.1030], τ = 0.01

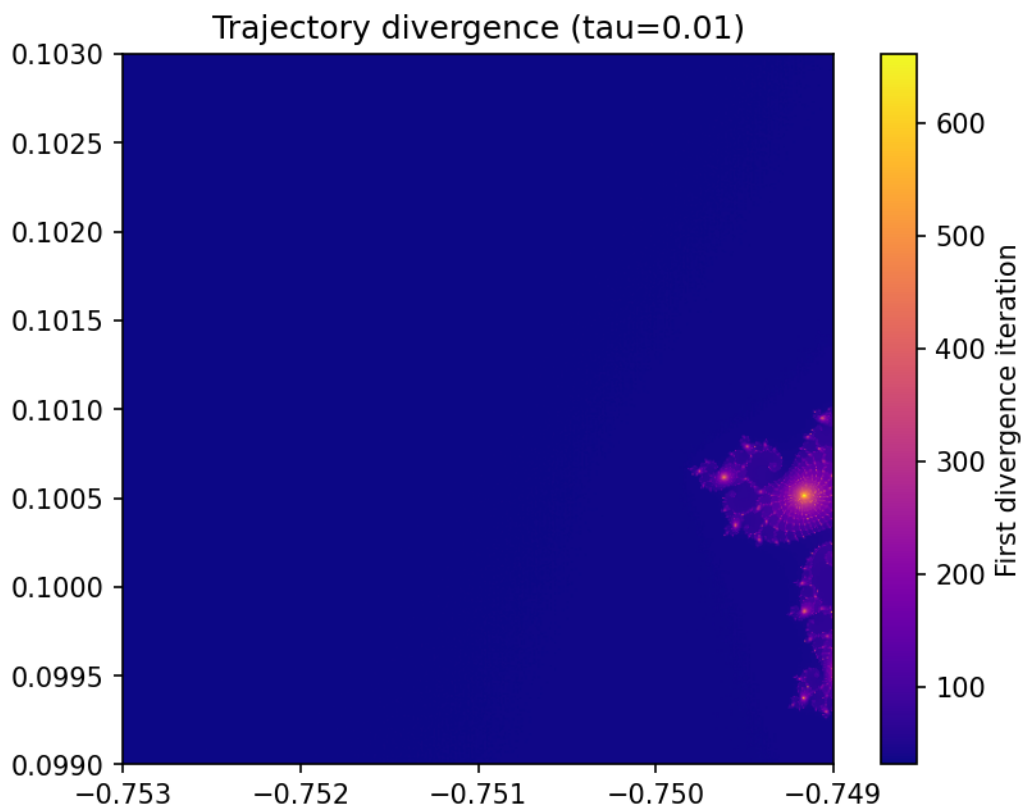

Figure 1: Trajectory divergence map (float32 vs float64) at Seahorse Valley

Observation:

Dark areas (early divergence) appear inside the Mandelbrot set and far outside.

Bright areas (late divergence) trace the fractal boundary (Seahorse Valley).

Float32 and float64 diverge exactly where the Mandelbrot set is most complex.

MP3 M2: Sensitivity Map

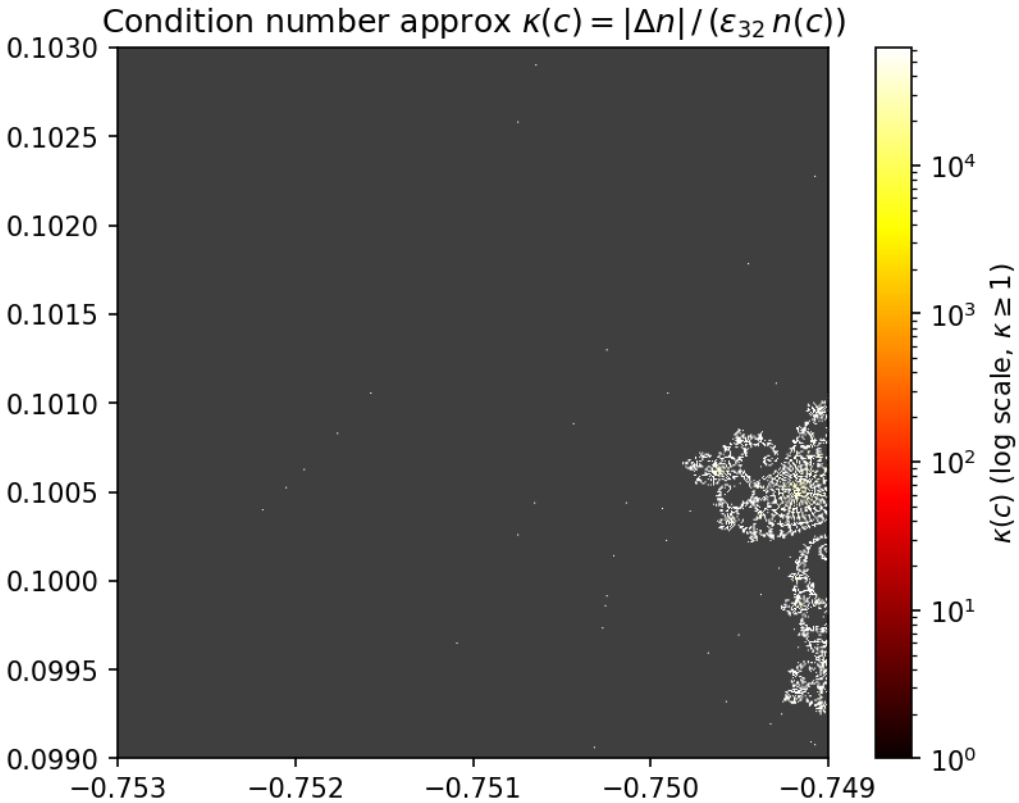

Figure 2: Sensitivity map (condition number approximation) at Seahorse Valley

Observation:

Dark areas (low κ) are well-conditioned (interior and exterior).

Bright areas (high κ) are ill-conditioned (fractal boundary).

The sensitivity map aligns with the trajectory divergence map:

high sensitivity = late divergence = fractal boundary.
